

COST Action INTERACT Deliverable 3rd Grant Period

Editors: Working group Chairs

COST CA20120 INTERACT

Funded by
the European Union

Contents

1	Radio Channel Modeling and Prediction	9
1.1	Scenarios	9
1.2	Frequency bands of interest	9
1.3	Wireless channel propagation fundamentals	9
1.4	Channel sounder design metrology	9
1.4.1	Channel Sounding Design	9
1.4.2	Metrology of Channel Sounding	9
1.4.3	Future Work	9
1.5	Channel measurements	9
1.5.1	sub-6 GHz Frequency Band	9
1.5.2	Mid-band (6 GHz - 24 GHz)	9
1.5.3	mmWave and (Sub-)THz band	9
1.5.4	Measurement data collection contributed to COST INTERACT WG1	10
1.6	Modeling methodologies	10
1.6.1	Stochastic models	10
1.6.2	Map-based models	10
1.6.3	Ray-based models	10
1.6.4	ML-based approaches	10
1.7	Channel parameter estimation	10
1.7.1	Parameter estimation techniques	10
1.7.2	MPC Clustering	10
1.8	New technologies	11
1.8.1	Measurements and Modeling for RIS	11
1.8.2	Channel Measurements and Modeling for ISAC	11
1.8.3	Channel Measurements and Modeling for ultra large arrays/MIMO	11
1.8.4	Advanced applications of ML to Propagation	11
1.8.5	Advanced Channel simulation and Emulation Techniques	11
2	Communication and perception	13
2.1	Signal Processing for Communications	13
2.1.1	Waveforms	13
2.1.2	Channel Coding	13
2.1.3	(Massive) MIMO	13
2.1.4	Massive Access	14
2.1.5	Impairments	14
2.1.6	O-RAN and disaggregation	15
2.1.7	Security/Vulnerability	15
2.1.8	Underwater communications	15
2.2	Signal Processing for Localization	15
2.2.1	Localization techniques	15
2.2.2	RSSI-based localization	16
2.2.3	Localization by radio systems with Ultra-Wide Band, LoRa and Signals of Opportunity	16
2.2.4	Localization utilizing low functional network elements like RIS for beyond fifth generation (5G) and sixth generation (6G) systems	16

2.2.5	Waveform design for ranging and localization	16
2.2.6	Testbeds and Demonstrations	16
2.3	Integrated Sensing and Communication	16
2.3.1	Introduction/defining ISAC terminology	16
2.3.2	Resource Allocation and Waveform Design	17
2.3.3	ISAC Channel Measurement	17
2.3.4	ISAC Channel Parameter Estimation and Modeling	17
2.3.5	Sensing in WiFi and Cellular Networks	18
3	Network, orchestration	19
3.1	Network and RAN optimization	19
3.2	ML for networks	19
3.3	Network user experience and quality measure	19
3.4	Network performance evaluation	19
3.5	Network sustainability	19
3.6	Network security and resilience	19
3.7	Network economics	19
3.8	Network Simulation, Digital twins, Data sets and experimentation	19
3.9	Small cell networks	19
3.10	None Terrestrial and UAV networks	19
3.11	Cell free massive MIMO networks	19
3.12	Non 3GPP networks	19
3.13	MANETs	19
4	Health and Well-Being	21
4.1	Wireless Communication with Implantable and Ingestible Medical Devices	21
4.1.1	First SubSection	21
4.2	Wireless Communication with Wearable Medical Devices	21
4.2.1	First SubSection	21
4.3	Health and Activity Monitoring for Diagnosis or Rehabilitation	21
4.3.1	First SubSection	21
4.4	Advanced Technologies for Public Health and Emergencies	21
4.4.1	First SubSection	21
4.5	Nano and Molecular Communication Networks	21
4.5.1	First SubSection	21
5	Electro Magnetic Field Exposure	23
5.1	Space-time dependence of EMF	23
5.2	5G exposure measurements	23
5.3	6G exposure predictions	23
5.4	Risk perception; Device and IoT exposure assessment	23
6	Intelligent Transport Systems	25
6.1	Introduction	25
6.1.1	Background on intelligent transportation system (ITS)	25
6.1.2	Objectives and scope of the white paper	25
6.1.3	Structure of the document	25
6.2	Fundamentals of ITS	25
6.2.1	Overview of ITS	25
6.2.2	Key features of ITS	25
6.2.3	ITS and 6G	25
6.3	V2V and V2X Communication	25
6.3.1	Overview and role in ITS (Cooperative perception and the need for communication (beam) alignment)	25
6.3.2	Architecture and current state-of-the-art	25
6.3.3	Channel models	25
6.3.4	Challenges	26

6.3.5	Case studies and practical implementations	26
6.4	Train-to-Train and Railway Communication	26
6.4.1	Overview and Importance	26
6.4.2	Channel models	26
6.4.3	Spectrum management	26
6.4.4	Train-to-train Communication	26
6.4.5	Train-to-infrastructure Communication	26
6.4.6	Railway Communication for passenger services	26
6.4.7	Case studies and practical implementations	26
6.4.8	Branch lines – com infrastructure for autonomous operation	26
6.4.9	6G specific protocols for Railways	26
6.5	Drone and UAV Integration	26
6.5.1	Overview and role in ITS	26
6.5.2	Channel models	26
6.5.3	Communication Challenges (handover, frequency spectrum, ...)	27
6.5.4	Operational challenges (safety and collision avoidance, power management, ...)	27
6.5.5	Cooperation awareness	27
6.5.6	Case studies and practical implementations	27
6.6	Aircraft to aircraft Communication	27
6.6.1	Overview and role in ITS	27
6.6.2	Channel models	27
6.6.3	Communication Challenges	27
6.6.4	Operational challenges (safety and collision avoidance, power management, ...)	27
6.6.5	Case studies and practical implementations	27
6.7	Advanced Network Architectures	27
6.7.1	Cell-Free Networks	27
6.7.2	Massive MIMO	27
6.7.3	MANETs and VANETs in ITS	27
6.7.4	Intelligent Surfaces and Antennas	27
6.8	Enhanced Functionality in ITS	28
6.8.1	Localization and Beamforming	28
6.8.2	Simulation, Ray Tracing, and Digital Twin	28
6.9	Joint Communication and Sensing	28
6.10	Security and Privacy in ITS	28
6.10.1	Privacy Concerns	28
6.10.2	Security Threats and Mitigation	28
6.11	Interoperability and Standardization	28
6.11.1	Need for interoperability in 6G ITS	28
6.11.2	Current standardization efforts	28
6.11.3	Proposals for future standards	28
6.12	Future Trends and Research Directions	28
6.12.1	Emerging technologies in 6G and ITS	29
6.12.2	Potential research areas	29
6.12.3	Long-term vision for ITS in the 6G era	29
6.12.4	Integration with Open RAN	29
6.13	Conclusion	29
7	Advancements in wireless technologies for industrial internet of things (IIoT)	31
7.1	Introduction	31
7.2	Communication challenges for IIoT	31
7.3	Factory propagation channel characterization and modeling	31
7.3.1	In various frequency bands	31
7.3.2	With regards to different applications (sensing and communication (ISAC) and Localization)	31
7.3.3	RF-Models	31
7.4	Channel estimation, access, and scheduling	31
7.5	Increasing energy efficiency	31

7.6	Safety and security aspects	31
7.7	5G enhancements and deployment options	31
7.8	Experimental validations	31
7.9	Conclusions	31
8	Buildings and cities	33
8.1	Introduction	33
8.2	Communication and Networking challenges for smart buildings and cities	33
8.3	Extended Reality	33
8.4	Cybersecurity	33
8.5	Energy Efficiency	33
8.6	Smart Cities Through Artificial Intelligence	33
8.7	PHYsical Layer integration for Smart Cities Simulations	33
8.8	Traffic Control	33
8.9	Future Directions	33
8.10	Conclusions	33
9	Databases	35
